```
No. is the number of results predicted by chance to have a 
greater than or equal to the score of the result being printed, 
s derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ; Search time 44.99 Seconds (without alignments) 22.376 Million cell updates/sec

DT 01-MAR-2002 (Rel. 41, Last annotation update)
DE Bell2-antagonist of cell death (BAD) (Bel-2 binding DE 6) (Bel-xL/Bel-2 associated death promoter).
           "14-3-9 proteins and survival kinases cooperate to inactivate BAD by RT H3 domain phosphorylation.";
RL Mol. Cell 6:41-51(2000).

C: I- PUNCTION: Promotes cell death. Successfully competes for the condition of these proteins with BAX. Can reverse the binding to Bcl-x(L), Bcl-2 and Bcl-w, thereby affecting the level of heterodimerization of these proteins with BAX. Can reverse the case in the apoptotic pathways.

CC death repressor activity of Bcl-x(L), but not that of Bcl-2 appears to act as a link between growth factor receptor signaling and the apoptotic pathways.

CC is SUBUNIT: Forms heterodimers with the anti-apoptotic proteins, Bcl-x(L), Bcl-2 and Bcl-w. Also binds protein S100All (By Similarity).

CC is SUBUNIT: Forms heterodimers with the anti-apoptotic string.

CC is SUBCELIJIAR LOCATION: Outer microhondrial membrane. Upon phosphorylation, locates to the cytoplasm.

CC is SUBCELIJIAR LOCATION: Outer microhondrial membrane. Upon phosphorylation and serill in response to survival stimul.

CC is DOWANN: Intact BH3 domain is required by BKR, BID, BAX, BAD AND CC is DOWANN: Intact BH3 domain is required by BKR, BID, BAX, BAD AND CC is the survival stimul.

CC is DOWANN: Intact BH3 domain is required by BKR, BID, BAX, BAD AND CC is DOWANN: Intact BH3 domain serill interaction with anti-apoptotic members of the Bcl-2 family.

CC is PROSphorylation at Ser-112 in response to survival stimul.

Subsequent phosphorylation at Ser-155, a site within the BH3 domain, leading the phosphorylation at Ser-155, a site within the BH3 domain, leading to the release of Bcl-x(L) and the promotein of cell survival.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 35

SUBUNIT: Forms heterodimers with the anti-apoptotic proteins; B

X(I), BCL-2 and BCL-w, Also binds protein $100A10. The Ser-
113/Ser-137 phosphorylated form binds 14-3-3 proteins.

SUBCELLULAR LOCATION: Outer mitochondrial membrane. Upon
phosphorylation, locates to the cytoplasm (By similarity) bc.
ALTERNATIVE PRODUCTS: 2 isoforms; alpha (shown here) and beta;
produced by alternative splicing. They differ only in their C-
terninal regions.

TISSUE SPECIFICITY: Expressed in all tissues tested, including
brain, liver, spleen and heart. In the brain, restricted to
epithelial cemis of the choroid plexus. Isoform alpha is the mc
homears forms.
                                                                                                                                                                                          SIMILARITY: CONTAINS A BCL-3 HOMOLOGY DOMAIN 3 SIMILARITY: BELONGS TO THE BCL-2 FAMILY.
                                                                                                                                                                                                                                                                                                       DOMAIN: Intact BH3 domain is required by BHK, BHD, BAK, BAD AND BAX for their pro-apoptootic activity and for their interaction with anti-apoptotic members of the Bcl-2 family.

PTM: Phosphorylated on Ser-113 in response to survival stimuli. Subsequent phosphorylation on ser-137 promotes heterodimerization with 14-3-3 proteins. This interaction then facilitates the phosphorylation at Ser-156, a site within the BH3 domain, leading to the release of Bcl-x(L) and the promotion of ccl survival. Ser-137 is the major site of KMT/PKB phosphorylation, Ser-156 the major site of ART/PKB phosphorylation, Ser-156 the injuriation of protein kinase A (CAPK) phosphorylation (BY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cell.                                                                                                                                                             "Rationale for Bcl-xL/Bad peptide complex formation from structure, mutagenesis, and biophysical studies.";
Protein Sci. 9:2528-2534(2000).

1- FUNCTION: Promotes cell death. Successfully competes for the binding to Bcl-x(L), Bcl-2 and Bcl-w, thereby affecting the level of heterodimerization of these proteins with BAX. Can reverse the death repressor activity of Bcl-x(L), but not that of Bcl-2 (By similarity). Appears to act as a link between growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ottilie S., Diaz J.-L., Horne W., Chang J., Wal

                                           SUBCELIJIAR LOCATION: Outer mitochondrial membrane. Upon phosphorylation, locates to the cytoplasm.
TISSUE SPECIFICITY: EXPRESSED IN A WIDE VARIETY OF TISSUES
                                                                                                                      receptor signaling and the apoptotic pathways. SUBUNIT: Forms heterodimers with the anti-apoptotic proteins, Bcl. x(L), Bcl-2 and Bcl-w. Also binds protein S100A10 (By similarity).
DOMAIN: Intact BH3 domain is required by BIK, BID, BAK, BAD AN BAX for their pro-apoptotic activity and for their interaction with anti-apoptotic members of the Bcl-2 family.
                                                                                          similarity)

SIMILARITY: CONTAINS 1 BCL-3 HOMOLOGY DOMAIN 3 (BH3).
SIMILARITY: BELONGS TO THE BCL-2 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Subsequent phosphorylation on Ser-99 promotes heterodimerization with 14-3-3 proteins. This interaction then facilitates the phosphorylation at Ser-118, a site within the BH3 domain, leading to the release of Bcl-x(L) and the promotion of cell survival. Ser-99 is the major site of AKT/PKB phosphorylation, Ser-118 the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PTM: Phosphorylated on Ser-75 in response to survival stimuli
                                                                                                                                                                                                                                                                                                                                                                                                                                   603167;

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                        Score

The invention relates to a peptide conjugate having the formula: (R-X)n-peptide where n = 1-10; x = C=0, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where the functional group of the side chain is NH2 or OH; or x = 0 or NH, when the R-X group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is COOH or CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one or two double bonds, cyclobretyl, cyclopentyl, cyclobexyl optionally monosubstituted with a 1-5C straight or branched chain alkyl group,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bcl-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; pastric; non-small lung; renal; thyroid; neuroblastoma; melanoma; lymphocytic leukemia; neurodegenerative disorder; AIDS; stroke; myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents the BH3 domain of human BAD. The invention relates to a bcl homology domain 3 (BH3 domain), derived from a proapopictic member of the BCL-2 family. The BH3 polypeptide can be used in a method for promoting apoptosis in a target cell, especially where the cell is a cancer cell a virus infected cell or an autoantibody producing cell. The BH3 polypeptide can be used in therapeutic compositions for treating disease including cancer, other lymphoproliferative conditions, arthritis, inflammation, and autoimmune diseases, which may result from the down regulation of cell death
                                                                                                                                                                                                                                                                                                                                                           New paptide conjugates for modulating apoptosis or for inhibiting ceil lymphoma/leukemia 2 (Bcl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                       Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    06-APR-2000; 2000WO-US09352.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bcl2 polypeptide BH3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (UYJE-) UNIV JEFFERSON THOMAS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               20020202020202020
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cc alkyl group, or benzyl. The peptides ARBT7001-837058 represent examples cc of the peptide portion of the conjugate. The peptides represent analogues cc of the speptide portion of the conjugate. The peptides represent analogues cc of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of the BHJ domain of the cell death agonist Bad. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for reversing B cell lymphoma/leukemia 2 (Bcl-2) mediated blockage of capoptosis in cancer cells. It is also useful for Inhibiting Bcl-2 (G function, in particular, the peptide conjugate is useful for treating a subject affilted with a cancer cantracterized by cancer cells that cancer self-2. The cancer includes prostate, colorectal, gastric, con-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or cacute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating disorders characterized by concers accurate is also useful for treating disorders characterized conjugate is also useful for treating disorders acquired conjugate is also useful for particular particular increased apoptosis, e.g. neurodegenerative disorders acquired conjugate is also useful for treating disorders acquired conjugate is also useful for treating disorders acquired conjugate is also useful for treating disorders acquired to the minus of the peptide conjugate is also useful for treating disorders acquired conjugate is also useful for treating disorders acquired the peptide conjugate is also useful for treating disorders acquired the conjugate is also useful for treating disorders acquired the conjugate is also useful for treating disorders acquired the conjugate is acquired the conjugate is acquired the conjugate is acquired to the conjugate is acquired the conjugate is acquired to the conjugate is acquired to the conjugate is acquired to the conjugate is acquired to the conjugate is acq

The present sequence is the mammalian Bad Bcl-2 homotopy domain 3 (BH3) domain, which was used in a sequence alignment with the same domain of a putative version of the mammalian apoptosis regulator BBC3, which was designated BBC3-ORF2. The BBC3 protein,

nucleic acids and antibodies are suitable for use in death or for preventing apoptosis in malignant cells

promoting cell and those causing

apoptosis

for preventing ne diseases.

                                                                               The present invention describes an isolated or synthetic polypeptide (1) comprising a less than full length anino acid sequence of a mutant (CC Ed-Nahol-2 associated ceal death regulator polypeptide (BAD) or its fragment, which contains anino acid substitutions at Serils of a mutant BAD, Serits of a mutant BAD (longer mutant BAD) or Serils of a mutant BAD, shorter mutathe BAD). (1) has immunostimulant, neuroprotective, contexpic, antivital, antification, and demandation and describes and cantenthritic, antificamentory and immunosuppressive activities and can be used as an apoptosis inducer or inhibitor. BAD polypeptides and compounds and device of activity that promote cell survival or apoptosis. Other uses include cinducing or inhibiting apoptosis in a cell. Candidate compounds (contexpined and (mutant) BAD polypeptides are useful in treating cinducing or inhibiting apoptosis in a cell. Candidate compounds (contexpined and (mutant) BAD polypeptides are useful in treating cinducing or inhibiting apoptosis in a cell. Candidate compounds (contexpined and (mutant) BAD polypeptides are useful in treating cinducing or inhibiting apoptosis, are susful in a cell. (candidate compounds of contexpined and (mutant) BAD polypeptides are useful in treating cinducing or inhibiting apoptosis, are thrills, infertility, intal infections, contexpined and contexpined sections, are thrills, infertility, intal infections, and contexpined action and contexpined sections, are thrills, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, infertility, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
